

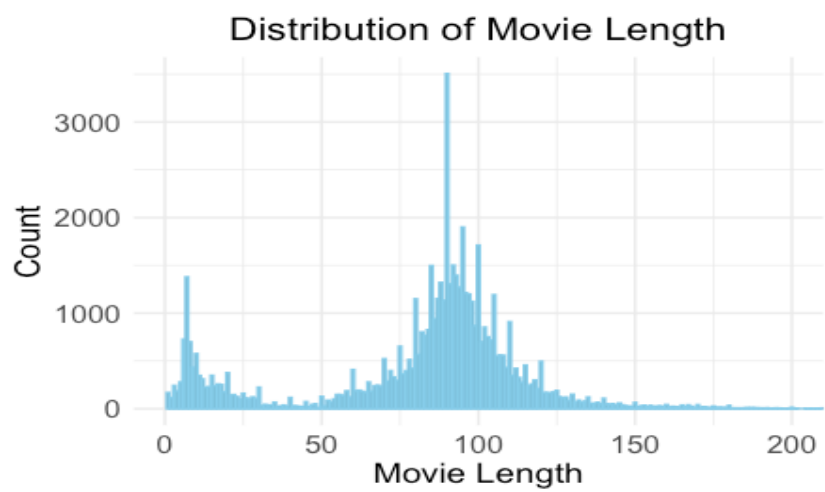

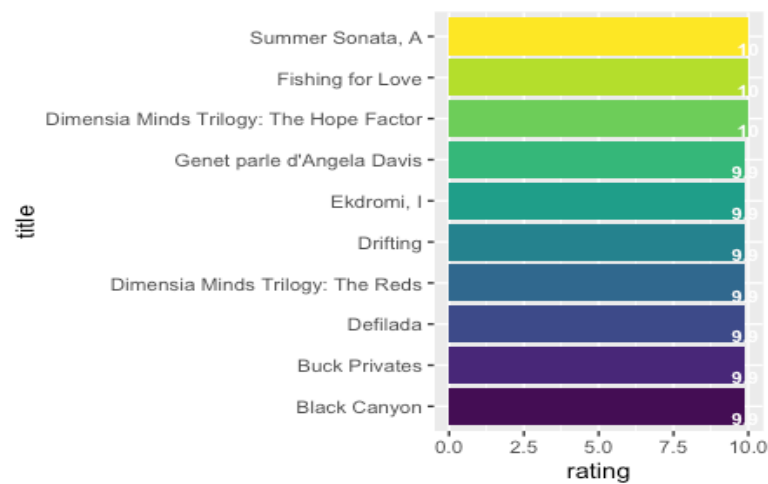

Chart1

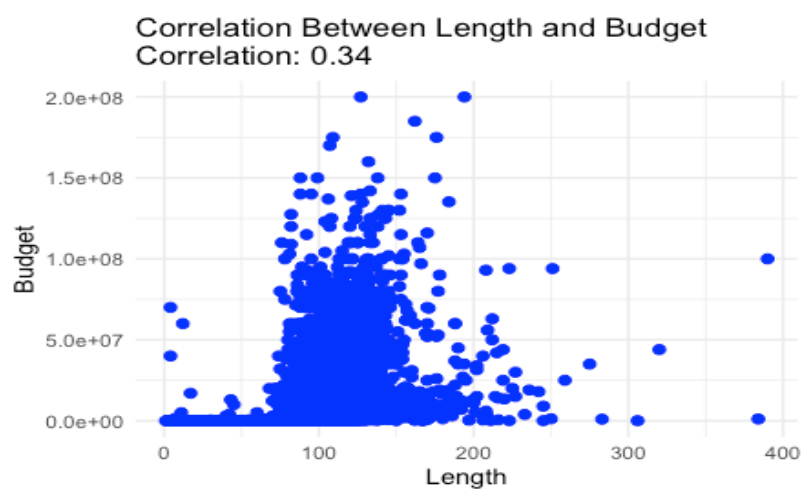

The chart illustrates that movies with a duration around 100 minutes are mainstream. Additionally, it can be observed that there is some production in movies with a duration of less than 30 minutes. However, films exceeding 150 minutes are relatively rare.

Chart2

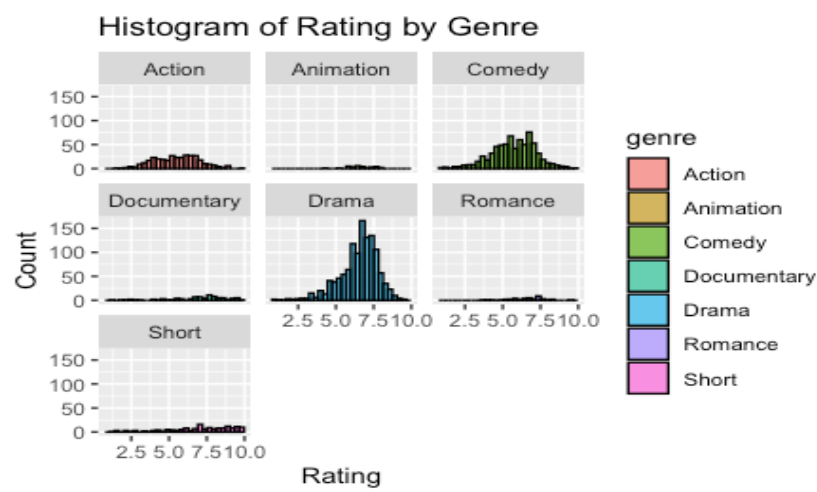

From this chart, we can see the names and ratings of the top 10 movies from the past data.

Chart3

The correlation coefficient of 0.34 in this chart suggests a moderate positive correlation between movie length and budget. In other words, as movie length increases, there is a tendency for the movie budget to also increase, but the relationship is not considered strong.

Chart4

This chart indicates that, compared to other genres, movies classified as drama, comedy, and action have a higher count of ratings. This suggests that they are more favored and receive greater attention from the audience.
